

Data Dictionary

This document describes the three source files provided for the assessment: `customers.csv` , `loans.csv` , and `repayments.csv` . Column names, data types, descriptions, and PII classifications are drawn from the company's data dictionaries (`dim_customers.csv` , `dim_loan_application.csv` , `dim_loan_repayment.csv`).

Scope: loans created March-June 2026 only. `loans.csv` is limited to loans with a creation date in that window. `customers.csv` and `repayments.csv` are then limited to whichever customers and repayments relate to those loans. A customer's own registration date is *not* filtered — a customer who registered well before March 2026 is still included if they hold a loan created in the window, so `customers.created_at` values earlier than March 2026 are expected and normal.

These are raw operational extracts. They are not guaranteed to be clean: expect missing values, duplicate records, inconsistent formatting, and other common data-quality issues, as described in the main assessment brief.

Overview

File	Rows	Columns	Grain	Description
customers.csv	3,382	11	One row per customer	Customers holding at least one loan created March-June 2026 (registration date itself may be earlier).
loans.csv	9,825	16	One row per loan application	Loan applications created March-June 2026.
repayments.csv	8,937	10	One row per repayment transaction	Repayments made against the loans above (a repayment's own date may fall after June 2026, e.g. a June loan repaid in July).

Relationships:

- `customers.customer_id` ← `loans.customer_id` (each loan belongs to one customer)
- `loans.loan_number` ← `repayments.loan_number` (each repayment is made against one loan)

customers.csv

Master table for all successfully registered customers, containing identity and account information (verified customers).

Column	Data Type	Description	PII
customer_id	VARCHAR(100) PRIMARY KEY	Unique internal identifier assigned to each customer during registration. Serves as the primary key.	No
active	BOOLEAN	Indicates whether the customer account is currently active.	No
created_at	TIMESTAMP	Timestamp when the customer record was created in the system.	No
createdat_id	BIGINT	Date dimension reference for analytics and reporting.	No
last_modified_date	TIMESTAMP	Timestamp when the record was last updated.	No
last_modified_date_id	BIGINT	Date dimension reference for last modification timestamp.	No
country	VARCHAR(100)	Customer's country of registration or residence.	No
customer_type	VARCHAR(50)	Classification of the customer (e.g. INDIVIDUAL).	No
document_number	VARCHAR(100)	Anonymized unique identifier (UUID) standing in for the government-issued ID number captured at registration. Still unique per customer and still useful for identity/duplicate checks, but does not itself reveal the customer's real ID.	No
document_type	VARCHAR(50)	Type of identification document (e.g. National ID).	No
customer_role	VARCHAR(100)	Defines the user's system role (e.g. Borrower).	No

loans.csv

Complete loan application lifecycle data from request to approval and disbursement linkage.

Column	Data Type	Description	PII
loan_number	VARCHAR(100) PRIMARY KEY	Unique identifier for each loan application.	No
customer_id	VARCHAR(100)	Foreign key to <code>customers.customer_id</code>	No

created_at	TIMESTAMP NULL	Timestamp when the loan application was created or submitted.	No
createdat_id	INTEGER	Surrogate date key for application creation, used for analytical joins.	No
last_modified_date	TIMESTAMP NULL	Timestamp of the last update or status change to the loan application.	No
last_modified_date_id	INTEGER	Surrogate date key for last modification, used in time-series reporting.	No
application_state	VARCHAR(50)	Current stage in the loan approval process (e.g. Disbursement Failed, Processed).	No
credit_limit	NUMERIC(15,2)	Maximum credit amount available to the customer at the time of application.	No
disbursable_amount	NUMERIC(15,2)	Amount eligible for disbursement after deductions.	No
is_top_up	BOOLEAN DEFAULT FALSE	Indicates whether the application is for a loan top-up rather than a new loan.	No
loan_amount	NUMERIC(15,2)	Requested loan amount by the customer.	No
commencement_date	DATE NULL	Expected or actual date when the loan is to commence upon approval.	No
commencement_date_id	INTEGER	Not documented in the company data dictionary. Surrogate date key for commencement_date , following the same pattern as createdat_id .	No
due_date	TIMESTAMP NULL	Expected repayment due date for the loan.	No
due_date_id	INTEGER	Not documented in the company data dictionary. Surrogate date key for due_date , following the same pattern as createdat_id .	No
request_balance	NUMERIC(15,2)	Amount remaining to be approved or processed from the requested loan.	No

repayments.csv

Captures all loan repayment transactions, including payment details and audit timestamps.

Column	Data Type	Description	PII
repayment_id	INTEGER PRIMARY KEY	Unique identifier for each repayment transaction.	No
created_at	TIMESTAMP NOT NULL	Timestamp when the repayment record was created.	No
createdat_id	BIGINT	Date key reference for the creation date.	No
last_modified_date	TIMESTAMP	Timestamp of the last modification.	No
last_modified_date_id	BIGINT	Date key reference for the last modification.	No
amount	NUMERIC(15,2)	Total repayment amount received.	No
batch_ref	VARCHAR(100)	Batch reference ID for grouped transactions.	No
loan_number	VARCHAR(100)	Identifier of the loan being repaid.	No
repayment_status	VARCHAR(50)	Status of the repayment (e.g. Processing).	No
transaction_narrative	TEXT	Description or narration of the transaction.	No
